RS POWDERTECH – RSC NG (Next Generation)

Dear Sir or Madam,

In 1996, we introduced the new generation of powder coating machines in the market by presenting the follow-up model of the RS 80. The machines are unchanged to date, except some minor modifications in 2004 in the filter system. Since then, the **RS POWDERTECH** powder coating machines type PBA / RSC from ROLF SCHLICHT GmbH stands for world-leading technology in this segment.

We are constantly interested in innovations and improvements to support your production needs through our machines. But we also do not want to jump immediately on every trend and unnecessarily question proven and reliable.

Based on our experience in the market in your production facilities, in combination with our research on filter systems and electrostatics as key components of our successful PBA/ RSC machine, we have noticed improvements that we do not want to withhold from you. That is why we are incorporating these improvements into the next generation of our machines, the RSC NG.

We are extremely pleased to **announce the launch of RSC NG in week 11/2019**, in time for our 60th anniversary.

In addition to a new filter system and improved electrostatics, some other minor changes will be incorporated. The adjustments will contribute to improved powder result, better handling, and ease of maintenance.

The **new filter system** shows significantly better cleaning results and has been designed to provide longer service life, as well as simpler, faster and cheaper maintenance. Spare parts costs are reduced.

UniCredit Bank AG, Hamburg
IBAN: DE62 2003 0000 0001 5088 11
BIC: HYVEDEMM300

The **new e-statics** are state-of-the-art in surface coating technology and show a reduction in wear parts in the gun and cascade.

As in the past, we have put a lot of emphasis on durability. It is of course also possible to convert your existing machines to both the latest generation of e-statics and the new filter system.

Thus, the **RS POWDERTECH** type RSC NG will be able to ensure even more reliable and cheaper lifecycle of your production.

Get an offer still today for the new RSC NG.

Of course, we are glad to answer your questions personally.

**Background information brands und company:
ROLF SCHLICHT GmbH – Quality & Competence since 1959**

For almost 60 years ROLF SCHLICHT GmbH has been developing, manufacturing and selling machines for the rubber, plastics and cable industry.

With our machines and our commercial agencies, we are your long-standing, competent partner for powdering and cutting solutions, as well as machines and equipment along the entire production chain.

Under the brand name "**RS POWDERTECH**" the company ROLF SCHLICHT GmbH started in 1983 with the "Talkator" the first automated, dust-free solution for the powdering of profiles and cables with different powders by the founder Rolf Schlicht. Starting with the Talkator, followed by the "RS 80" we are today at the latest (but certainly not last) machine generation, the RSC (Rolf Schlicht Coating RSC XXX-2E to 4E and RSC XXX-2N to 4N).

Under the brand name "**RS MULTICUT**" develops, manufactures and sells ROLF SCHLICHT GmbH together with various partners machines for cutting of a wide range of materials and profiles in the extrusion sequence as well as peripheral equipment required for this purpose. (MC, OC, CC, TEM, TGM, TGT, RS NM guillotine and circular knives, caterpillars series RB and discharge systems).

60 years of experience in the market, excellent contacts in the industry and close, trusting cooperation with our customers and our agents in different countries have contributed to the continuous improvement of our products.

Development and manufacturing partnerships lasting up to 40 years ensure that ROLF SCHLICHT GmbH can offer high-quality products and competent solutions at all times in the company's history.

Since 2018 we also offer in-house service for commissioning, maintenance and repair of our machines.
